

Bluebird and Cavity Nesting Bird Program

The Warrington Environmental Advisory Council (WEAC) is implementing a Bluebird and cavity nesting bird program along this trail and throughout the Township. Bird boxes have been installed at specific locations along this trail and throughout the Township to increase cavity bird populations.

Bluebirds and other cavity nesting birds such as tree swallows, screech owls, and kestrels provide many benefits to our community by eating insects and small rodents.

Take time to observe but do not disturb. We appreciate your cooperation.
For More information or to purchase a box contact the WEAC at:

EAC.Warrington@gmail.com
